Scan to verify

Opens the verifier with this receipt. Add the file to confirm the match.

Open verifier

What this shows. This exact file matches a commitment recorded in the registry contract on Kadena, in the block given.

What this does not show. Who wrote the file, when it was delivered, whether its content is correct, or that no other version exists.

This certificate is a convenience. The proof is the check itself. Keep your original file and the JSON receipt together; you can verify them later for free. Sharing this certificate shares the receipt and the file's name, not your file.
